

Strengths

Hyplast's success relies on:

- Specialized high-quality products
- Balance between price and quality
- An intense product development policy
- Advanced technologies
- A wide spread distribution network
- Highly committed employees
- Well developed relationships with our customers
- Reliable customer service (pre- and after-sales)

A fully-fledged laboratory continuously monitors quality, develops new products and modifies existing specifications to meet changing market demands

A world of plastics

Company profile

Hyplast NV, established in 1975, produces a wide range of polyethylene films for many different applications in the agricultural, horticultural, construction and converting industry.

Hyplast NV can rely on state-of-the-art equipment for the production of monolayer as well as co-extruded films up to 3 and 7 layers. The production capacity is about 40.000 tons.

Daughter company KPR (Belgium - Hoogstraten) recycles the production waste from Hyplast, and clean film waste from external suppliers. The service office in the United States (Chester, South Carolina), Klerks Hyplast Inc., takes care of the distribution in the United States and Canada.

Horticultural Films

- Greenhouse
- Mulch
- Direct cover
- Fumigation

Through intensive research and development and many years of experience Hyplast has managed to build a solid reputation as a supplier of high quality horticultural films. These films induce a more favourable climate for plant growth and improve the overall crop quality.

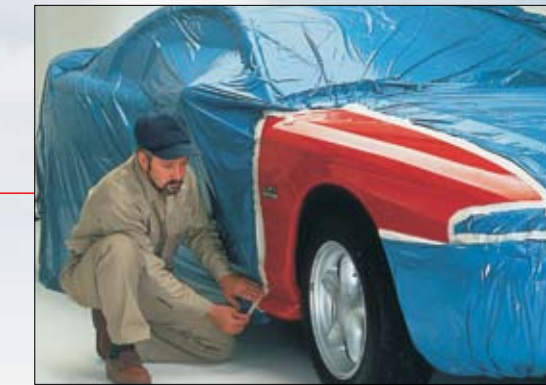

Agricultural Films

- Silage
- Stretch
- Silobag

The nutritious value of fodder can only be safeguarded by using a high quality means of conservation. Hyplast offers a full range of high quality co-extruded films for this application.

Industrial Films

- Liners
- Packaging
- Automotive

Hyplast offers a wide range of specialised films for the industrial market. The majority of these films - barrier or non-barrier - are custom-made to meet specific market and customer demands.

Builders Films

The construction business demands films to prevent the ingress of moisture, etc. Besides regular PE-films, Hyplast offers high-tech films for very specific niche applications (e.g. high barrier films to be used in Radon-gas sensitive areas).
